

## **Cavotec wins breakthrough automated vacuum mooring order in Far East**

May 21, 2021

In a major breakthrough for automated mooring, our MoorMaster™ technology has been selected for installation at a roll-on/roll-off berth in a key market in the Far East. This is the first installation of this unique mooring system in Asia and highlights widespread interest in the technology and its growing use around the world.

"This order demonstrates the high quality of our MoorMaster system and is a clear indication of how vacuum mooring is becoming the new standard for mooring worldwide," says Patrick Mares, President of Cavotec's Ports & Maritime Division.

The MoorMaster system will moor a 180m-long roll-on/roll-off vessel at a port in the Far East. It will create a safer and less stressful work environment for employees on board the vessel and ashore. It will also contribute to greater berth availability due to reduced vessel motion. The system will be installed in 2022.

MoorMaster eliminates the need for conventional mooring lines by replacing them with automated vacuum pads that moor and release vessels in seconds. Its patent-protected Active Control™ technology minimises vessel motion, thereby drastically improving port productivity.

First introduced 20 years ago, MoorMaster is the only proven and widely used vacuum mooring technology. It is used at is used at bulk, container handling, lock, roll-on/roll-off, and ship-to-ship applications worldwide.
